

GLEAM and HyGLEAM

Short Introduction, Guide for a Quick Installation, Copyright, and Licenses

1. Short Introduction

GLEAM (General Learning Evolutionary Algorithm and Method) is an Evolutionary Algorithm (EA) of its own and HyGLEAM (Hybrid General Purpose Evolutionary Algorithm and Method) is its memetic extension. GLEAM uses chromosomes whose genes can be easily configured in an application-specific way, so that a gene can determine all (relevant) properties of a given phenotypic element. For example, in a scheduling problem, this could be the resources to be used in a scheduling operation, e.g., a workstation or a classroom and an appropriate tutor. GLEAM works with three types of chromosomes: Fixed-length chromosomes with or without meaning-bearing order, and dynamic-length chromosomes also with meaning-bearing order. In GLEAM, fitness calculation is based on the (cascaded) weighted sum. To control the selective pressure, partner selection is performed with linear ranking. Furthermore, instead of the otherwise common panmictic population, a structured one based on the neighborhood model is used. The self-adaptive balance between breadth-first and depth-first search thus achieved efficiently counteracts premature convergence. The neighborhood model can be viewed as a linear variant of cellular EAs. The memetic extension of GLEAM integrates local search procedures or heuristics to speed up evolutionary search.

Further details and references can be found in the User Manual and in the rest of the documentation found in the `Docu` sub directory.

There are two program versions of GLEAM per application, one command line version (CLV) and one with a simple textual user interface (TUI). Both are started in a shell. There is no implementation with a graphical user interface.

The software is written in C under Linux. The distribution is based on Ubuntu 20.04.1 LTS and the `gcc` 9.3.0 compiler. The `make` utility is required for program generation.

2. Quick Installation

As the GLEAM distribution contains pre-compiled programs it may not be necessary to compile and link a new program for a first start. In particular, if you use a Linux distribution like Ubuntu.

Otherwise, the `gcc` and `g++` compilers are required, which are usually shipped with tools like the `make` utility. The `gnuplot` program should also be installed. It is used to visualize results and the normalization or penalty functions used for fitness calculation.

The following steps are based on the recommended directory structure:

1. Create a directory as root for your installation. E.g.
`/home/<your user name>/gleam`
2. Download the contents of the distribution into that directory. This should result in four sub directories of the `gleam` folder named `Docu`, `InitFiles`, `linux`, and `sources`.
3. Open a unix shell and move to one of the three applications contained in the `linux` folder, e.g. `gleam_ae`. Move to the `testfield` sub folder.
4. Create the environment variable `GLEAM_ROOT` pointing at the `InitFiles` folder. In Ubuntu linux this is done by the command:
`export GLEAM_ROOT=/home/<your user name>/gleam/InitFiles`
You may wish to include this command in your start-up script (e.g. `.bashrc`) to avoid having to repeat the command at every shell start.
5. Assuming you have moved to `gleam_ae/testfield` you can start now GLEAM by entering:
`../gleam_ae mbf_fox_rot_e.exp myFirst.log`
6. Have fun! And may be it is wise to take a look into the documentation like the user Manual or the documentation on applications already included in GLEAM. Like the Foxhole test function, for which you have just loaded the initialization files.

In case the included programs do not start, a recompilation is probably a suitable procedure. For this you move into one of the program directories, e.g. `gleam_ae`. There you adapt with an editor the file `glob_inc.mak`, in which you assign the correct path to the variable `ROOT`. This is the first statement after the comment part. After that you compile the program by calling `make` without parameters.

The compilation of the English-language TUI variants is preset in the `schalter.h` files for all three applications. For the compilation of the CLV versions or German program variants it is absolutely necessary to consult the software documentation beforehand, especially the sections 2.6 and 3.1. There the procedure is described in detail. Non-compliance will be punished with (many) error messages!

If a compiler other than `gcc` is to be used, more changes are required. In the files `makefile` and `gleamCLV.mak`¹ the compiler switches and the declaration of the used compiler in the variable `CC` have to be adapted. For this the documentation of the used compiler and if necessary the make utility is to be consulted. The mentioned modifications have to be repeated for the make files of the other two applications.

3. Copyright and Licenses

This is free software, which is governed by the Lesser GNU Public Licence (LGPL), version 3, see below.

Copyright (c) 2003 .. 2021 Christian Blume, Wilfried Jakob

The copyright of GLEAM (General Learning Evolutionary Algorithm and Method, former: Genetic Learning Algorithm and Method) is owned by Prof. Dr. Christian Blume.

¹ The make files of the CLV versions of the other two applications are called `hyGleamCLV.mak` and `hyGleamOpalvCLV.mak` respectively.

The copyright of HyGLEAM (Hybrid General purpose Evolutionary Algorithm and Method), a software based on GLEAM, is owned by Dr. Wilfried Jakob, Karlsruhe Institute of Technology (KIT).

This file is part of GLEAM and HyGLEAM. GLEAM and HyGLEAM are free software: you can redistribute them and/or modify them under the terms of the GNU Lesser General Public License as published by the Free Software Foundation, either version 3 of the License, or (at your option) any later version.

GNU LESSER GENERAL PUBLIC LICENSE

Version 3, 29 June 2007

Copyright © 2007 Free Software Foundation, Inc. <<http://fsf.org/>>

Everyone is permitted to copy and distribute verbatim copies of this license document, but changing it is not allowed.

This version of the GNU Lesser General Public License incorporates the terms and conditions of version 3 of the GNU General Public License, supplemented by the additional permissions listed below.

0. Additional Definitions.

As used herein, "this License" refers to version 3 of the GNU Lesser General Public License, and the "GNU GPL" refers to version 3 of the GNU General Public License.

"The Library" refers to a covered work governed by this License, other than an Application or a Combined Work as defined below.

An "Application" is any work that makes use of an interface provided by the Library, but which is not otherwise based on the Library. Defining a subclass of a class defined by the Library is deemed a mode of using an interface provided by the Library.

A "Combined Work" is a work produced by combining or linking an Application with the Library. The particular version of the Library with which the Combined Work was made is also called the "Linked Version".

The "Minimal Corresponding Source" for a Combined Work means the Corresponding Source for the Combined Work, excluding any source code for portions of the Combined Work that, considered in isolation, are based on the Application, and not on the Linked Version.

The "Corresponding Application Code" for a Combined Work means the object code and/or source code for the Application, including any data and utility programs needed for reproducing the Combined Work from the Application, but excluding the System Libraries of the Combined Work.

1. Exception to Section 3 of the GNU GPL.

You may convey a covered work under sections 3 and 4 of this License without being bound by section 3 of the GNU GPL.

2. Conveying Modified Versions.

If you modify a copy of the Library, and, in your modifications, a facility refers to a function or data to be supplied by an Application that uses the facility (other than as an argument passed when the facility is invoked), then you may convey a copy of the modified version:

- a) under this License, provided that you make a good faith effort to ensure that, in the event an Application does not supply the function or data, the facility still operates, and performs whatever part of its purpose remains meaningful, or
- b) under the GNU GPL, with none of the additional permissions of this License applicable to that copy.

3. Object Code Incorporating Material from Library Header Files.

The object code form of an Application may incorporate material from a header file that is part of the Library. You may convey such object code under terms of your choice, provided that, if the incorporated material is not limited to numerical parameters, data structure layouts and accessors, or small macros, inline functions and templates (ten or fewer lines in length), you do both of the following:

- a) Give prominent notice with each copy of the object code that the Library is used in it and that the Library and its use are covered by this License.
- b) Accompany the object code with a copy of the GNU GPL and this license document.

4. Combined Works.

You may convey a Combined Work under terms of your choice that, taken together, effectively do

not restrict modification of the portions of the Library contained in the Combined Work and reverse engineering for debugging such modifications, if you also do each of the following:

- a) Give prominent notice with each copy of the Combined Work that the Library is used in it and that the Library and its use are covered by this License.
- b) Accompany the Combined Work with a copy of the GNU GPL and this license document.
- c) For a Combined Work that displays copyright notices during execution, include the copyright notice for the Library among these notices, as well as a reference directing the user to the copies of the GNU GPL and this license document.
- d) Do one of the following:
 - 0) Convey the Minimal Corresponding Source under the terms of this License, and the Corresponding Application Code in a form suitable for, and under terms that permit, the user to recombine or relink the Application with a modified version of the Linked Version to produce a modified Combined Work, in the manner specified by section 6 of the GNU GPL for conveying Corresponding Source.
 - 1) Use a suitable shared library mechanism for linking with the Library. A suitable mechanism is one that (a) uses at run time a copy of the Library already present on the user's computer system, and (b) will operate properly with a modified version of the Library that is interface-compatible with the Linked Version.
- e) Provide Installation Information, but only if you would otherwise be required to provide such information under section 6 of the GNU GPL, and only to the extent that such information is necessary to install and execute a modified version of the Combined Work produced by recombining or relinking the Application with a modified version of the Linked Version. (If you use option 4d0, the Installation Information must accompany the Minimal Corresponding Source and Corresponding Application Code. If you use option 4d1, you must provide the Installation Information in the manner specified by section 6 of the GNU GPL for conveying Corresponding Source.)

5. Combined Libraries.

You may place library facilities that are a work based on the Library side by side in a single library together with other library facilities that are not Applications and are not covered by this License, and convey such a combined library under terms of your choice, if you do both of the following:

- a) Accompany the combined library with a copy of the same work based on the Library, uncombined with any other library facilities, conveyed under the terms of this License.
- b) Give prominent notice with the combined library that part of it is a work based on the Library, and explaining where to find the accompanying uncombined form of the same work.

6. Revised Versions of the GNU Lesser General Public License.

The Free Software Foundation may publish revised and/or new versions of the GNU Lesser General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Library as you received it specifies that a certain numbered version of the GNU Lesser General Public License "or any later version" applies to it, you have the option of following the terms and conditions either of that published version or of any later version published by the Free Software Foundation. If the Library as you received it does not specify a version number of the GNU Lesser General Public License, you may choose any version of the GNU Lesser General Public License ever published by the Free Software Foundation.

If the Library as you received it specifies that a proxy can decide whether future versions of the GNU Lesser General Public License shall apply, that proxy's public statement of acceptance of any version is permanent authorization for you to choose that version for the Library.
